# LIMITED WARRANTY

US

Products manufactured by GRUNDFOS PUMPS CORPORATION (Grundfos) are warranted to the original user only to be free of defects in material and workmanship for a period of 24 months from date of manufacture. Grundfos' liability under this warranty shall be limited to repairing or replacing at Grundfos' option, without charge, F.O.B. Grundfos' factory or authorized service station, any product of Grundfos' manufacture. Grundfos will not be liable for any costs of removal, installation, transportation, or any other charges which may arise in connection with a warranty claim. Products which are sold but not manufactured by Grundfos are subject to the warranty provided by the manufacturer of said products and not by Grundfos' warranty. Grundfos will not be liable for damage or wear to products caused by abnormal operating conditions, accident, abuse, misuse, unauthorized alteration or repair, or if the product was not installed in accordance with Grundfos' printed installation and operating instructions.

To obtain service under this warranty, the defective product must be returned to the distributor or dealer of Grundfos' products from which it was purchased together with proof of purchase and installation date, failure date, and supporting installation data. Unless otherwise provided, the distributor or dealer will contact Grundfos or an authorized service station for instructions. Any defective product to be returned to Grundfos or a service station must be sent freight prepaid; documentation supporting the warranty claim and/or a Return Material Authorization must be included if so instructed.

**GRUNDFOS WILL NOT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES, LOSSES, OR EXPENSES ARISING FROM INSTALLATION, USE, OR ANY OTHER CAUSES.  
THERE ARE NO EXPRESS OR IMPLIED WARRANTIES, INCLUDING MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, WHICH EXTEND BEYOND THOSE WARRANTIES DESCRIBED OR REFERRED TO ABOVE.**

Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages and some jurisdictions do not allow limit actions on how long implied warranties may last. Therefore, the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from jurisdiction to jurisdiction.

### *Warning*

*Prior to installation, read these installation and operating instructions. Installation and operation must comply with national, state, and local regulations and accepted codes of good practice.*

## 1. Symbols used in this document

### **Warning**

*If these safety instructions are not observed, it may result in personal injury!*

### **Warning**

*If these instructions are not observed, it may lead to electric shock with consequent risk of serious personal injury or death.*

**Caution**

*If these safety instructions are not observed, it may result in malfunction or damage to the equipment.*

**Note**

*Notes or instructions that make the job easier and ensure safe operation.*

## 2. General description

The relay module is an expansion module for circulator pumps GRUNDFOS MAGNA 32-100.

The relay module is used for the control and monitoring of the pump. The pump can be started/stopped via an external relay and give fault, ready or operating indication. The functions can be utilized via an external control system, e.g. a building management system.

The relay module offers the following functions:

- **External start/stop**, see section 5.
- **Fault, ready and operating indication via signal relay**, see section 6.

### 3. Connection

The electrical connection and protection must be carried out in accordance with local regulations.

The relay module is powered wirelessly from the pump.

To ensure correct function, follow the instructions in section 4.2 *Mounting the module*.

Connect the module as shown in fig. 1.

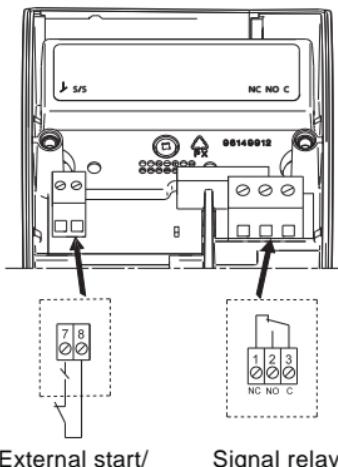

- Caution**
- All cables must be heat-resistant up to +185 °F (+85°C).
  - All cables must be installed in accordance with National Electric Code.

**Wires connected to**

- the outputs NC, NO, C and
- the start/stop input

**must be electrically isolated from each other.**

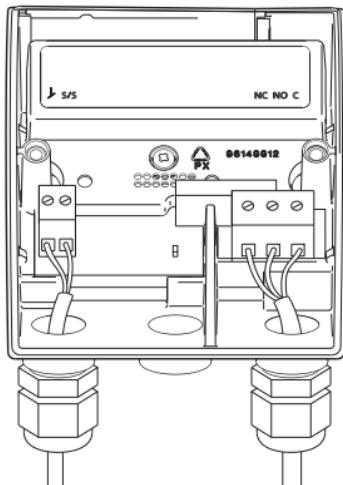

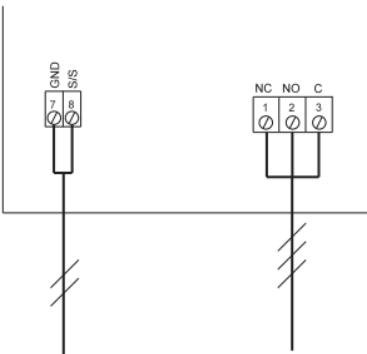

**Fig. 1** Connection terminals

A connection example is shown on page 8.

## 4. Mounting

### 4.1 Connecting the cables

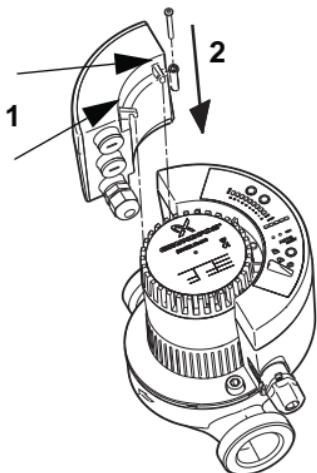

US

**Fig. 2** Cable connection

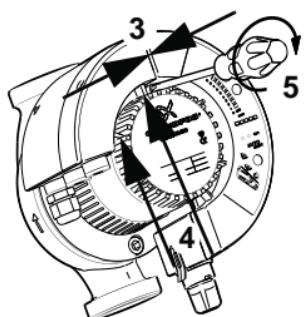

TM03 0876 0705

## 4.2 Mounting the module

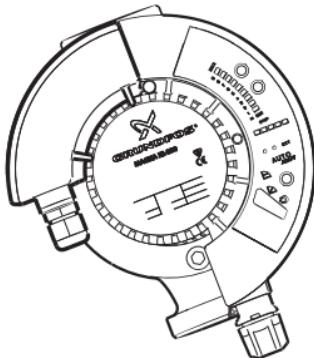

1. Align the two hooks on the module.
2. Gently push the module into place so that the hooks engage with the control box.

TM03 0881 0705

3. Check that the module and the control box touch each other.
4. Check that the two hooks of the module engage correctly with the control box.
5. Fasten the module with the screw.

TM03 0880 0705

6. Correctly mounted module.

TM03 0896 0705

## 5. External start/stop

The relay module incorporates a digital input for an external contact. The pump can be started and stopped via this input.

When started, the pump will operate with the setpoint set on the control panel or with the R100.

**Note** *If the external contact is used, the connection between terminals 7 and 8 must be replaced by the external connection.*

### Functional diagram: Start/stop input

Contact position	Function
	Stop of pump
	Start of pump

## 6. Signal relay

The function of the signal relay can be set with the R100.

Possible functions:

- *Fault*
- *Ready*
- *Operation.*

### 6.1 Fault indication

The signal relay is activated in case of

- *Pump blocked*
- *Internal fault*
- *Undervoltage.*

See section 6.4 *Functional diagram*.

When the fault disappears, the signal relay is deactivated. The fault cause is stored in the pump alarm log. The last five faults can be called up with the R100.

***In case of a fault, the red indicator light on the control panel is on.***

**Note**

***See installation and operating instructions for GRUNDFOS MAGNA 32-100.***

## 6.2 Ready indication

The signal relay is active when the pump is in operation or ready for operation.

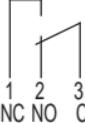

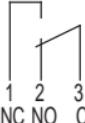

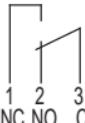

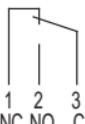

See section 6.4 *Functional diagram*.

## 6.3 Operating indication

The signal relay is active as long as the pump is operating. If the pump is stopped on the control panel, with the R100 or because of a fault, the signal relay is deactivated and consequently gives a signal to an external control system, e.g. a building management system.

See section 6.4 *Functional diagram*.

## 6.4 Functional diagram

Setting	Relay	Description
Fault	 1 NC NO 3 C	Pump fault
Ready	 1 NC NO 3 C	In operation Ready for operation
Operation	 1 NC NO 3 C	In operation
-	 1 NC NO 3 C	Relay inoperable

## 7. Priority of settings

The external forced-control signals will influence the settings available on the pump control panel and with the R100. However, the pump can always be set to max. curve duty or to stop on the control panel or with the R100.

If two or more functions are activated at the same time, the pump will operate according to the setting with the highest priority.

The priority of the settings is as shown in the table:

Priority	Possible settings	
	Pump control panel or R100	External signals
1	Stop	–
2	Max. curve	–
3	–	Stop
4	Min. curve	–
5	Setpoint setting	–

**Example:** If the pump has been forced to stop via an external signal, the pump control panel or the R100 can only set the pump to max. curve.

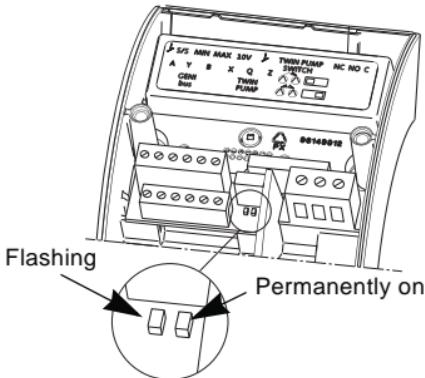

## 8. Fault finding chart

***Before starting any work on the module, make sure that the electricity supply to the pump and the module has been switched off and that it cannot be accidentally switched on.***

Fault	Cause	Remedy
The pump does not react to external start/stop.	The wires are not connected correctly to the terminal block.  The pump was stopped on the control panel or with the R100.	Connect the wires correctly.  Set the pump back to normal duty.
	Relay module not mounted correctly. Relay module defective. Control box defective.	Mount the relay module correctly. Replace the relay module. Replace the control box.
The pump does not send the correct signal from the signal relay.	The wires are not connected correctly to the terminal block.  Signal relay not configured correctly.	Connect the wires correctly.  Configure the signal relay correctly. The R100 can be used.
	Relay module not mounted correctly. Relay module defective. Control box defective.	Mount the relay module correctly. Replace the relay module. Replace the control box.

## 8.1 Checking the module

Illustration	Action
	<p>1. Remove the module cover.</p> <p>2. Check the LEDs. When the pump is switched on and the module is correctly mounted, the left LED must be flashing and the right LED must be permanently on.</p> <p>3. Refit the module cover.</p>

TM03 0892 0705

## 9. Technical data

Input for start/stop	External potential-free contact. Contact load: 5 V, 1 mA. Screened cable. Loop resistance: Maximum 130 Ω.
Output for signal relay	Potential-free changeover contact. 400 VAC, 6 A AC1. 30 VDC, 6 A.

Subject to alterations.
