

NuvoH2O Heater Cleaner

Catalog #DPHC

Quick-Connect Version

SPECIFICATIONS

Product Overview

The nuvoH2O Water Heater Treatment System provides naturally conditioned water without the hassle of salt. NuvoH2O uses a process called chelation (pronounced key-LAY-shun) which binds with minerals in the water so they cannot react with other elements to produce scale.

The nuvoH2O Water Heater Treatment System is engineered around a compact, integrated cartridge and housing with a quick-connect design that makes maintenance quick and easy. The self-locking mechanism assures a leak-proof connection in seconds without all of the mess typically associated with the cartridge replacements found in competitive systems.

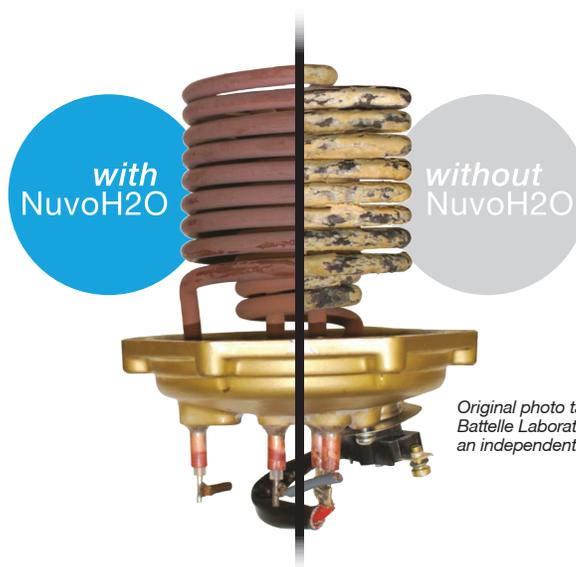

NuvoH2O Water Heater Treatment System not only prevents hard water build-up but it can help reduce and remove existing scale helping to restore your water heater to near-new efficiencies. The NuvoH2O Water Heater Treatment System not only saves on the operating costs of your water heater, but can reduce maintenance costs and extend the life of this critical appliance.

Product Benefits

- Protects and extends the life of water heaters, plumbing fixtures and appliances by preventing the accumulation of scale
- Removes scale restoring operating efficiencies to water heaters and appliances
- Eco-friendly—no salt, no waste water, no electricity
- Easy installation - no drain, no calibration, no electricity and no soft-water loop required
- Compact design fits almost anywhere
- Easy, quick-connect change cartridge

System Specifications

- Quick-connect cartridge
- Size: 4" x 12.5"
- Weight: approx. 2 pounds
- 3/4" Ports
- Water Flow: 10 GPM at 60 PSI
- Max Pressure: 100 PSI (6.8 bar)
- In-line System
- Capacity: 25,000 gallons
- Point-of-Use Treatment Only
- Built-in Pressure Release Valve
- Installation Guide
- Mounting Bracket & Hardware Included
