

## **SDS MAX ONE-PIECE CORE BITS**

#### **OVERVIEW**

MILWAUKEE's SDS Max One-Piece Carbide Tipped Core Bits are ideal for drilling large holes where the depth is relatively shallow. The core bit cuts a kerf only. The inside core must be removed by the operator before deeper drilling can be accomplished. Includes Centering Bit 48-20-5495. Use Drift Key 48-20-5497 (not included) to remove Centering Bit from the one-piece core bit. The one-piece core bits are available in SDS Max or Spline shanks. They come in a variety of diameters ranging from 1-1/2" to 6" with overall lengths of 11-3/8" or 22" and a drilling depth of 3". The asymmetric tooth pitch with alternating tooth geometries creates faster material pulverization. The one-piece design maximizes energy transfer and the thick wall core body is durable even in large hammers. The fluted core exterior minimizes friction loss and removes debris faster.

# **FEATURES**

- Asymmetrical and Alternating Teeth for faster material pulverization
- Thick Wall Core Body for durability even in large hammers
- Includes Centering Bit to reduce bit walking and create exact spot drilling

# **SDS MAX SELF-SHARPENING CHISELS**

#### **OVERVIEW**

MILWAUKEE® SDS Max Self-Sharpening Chisels provide longer life and increased productivity during general demolition applications. The extended feature length at the tip of the chisel enables up to 2X longer life compared to standard chisels and up to 30% longer life compared to other self-sharpening chisels. The Self-Sharpening tip geometry helps the bit maintain its shape throughout the life of the chisel, providing increased productivity by breaking up the material more effectively. High grade, forged steel enables increased durability in abusive, concrete applications.

#### **FEATURES**

- Extended Tip Length for up 2X longer life
- Self-Sharpening Tip maintains a cutting edge throughout the life of the bit
